

Using This Product:

- The upper handle controls the flow rate and is operated anticlockwise on.
- The lower handle controls temperature, the factory set maximum temperature is 41°C (models without stop/override button), or 38°C (models with stop/override button) this can be overridden to a maximum of 42°C with the button depressed.

Important Technical Data:

- Minimum operating pressure 0.2 bar (open exit)
- Maximum operating pressure 5 bar*
- Maximum cold water temperature 25°C
- Minimum hot water temperature 60°C
- Maximum recommended hot water temperature 80°C
- Factory default maximum ‘safe zone’ output temperature 41-42°C

*Note: If these pressures are exceeded, even for short periods, damage can result. In these instances a pressure reducing valve should be installed.

The incoming hot water temperature must be a minimum of 10°C above the outgoing water temperature to ensure the correct function of the thermostatic cut off.

All thermostatic products should be tested and cleaned at least once a year, inlet mesh particle filters should be periodically checked and cleaned to maintain flow. If access to mesh filters is not easy, then the filters should be omitted from the installation as shown and separate particle filters should be included in a more accessible position.

When drilling or preparing walls take care not to disturb existing water or electrical supplies that may be buried within the wall.

Supply pipes should maintain the maximum diameter until immediately before the fitting.

Hot and cold supply pressures should be as closely balanced as possible for best results. The differential between the hot and cold water supply temperatures should be sufficient to allow correct mixing function; the maximum hot / cold pressure differential ratio is 5:1. Where pressures are greatly imbalanced flow restricting valves or pressure reducing valves should be installed on the supply with the greater incoming pressure.

Abode products are either WRAS approved or manufactured in accordance with recognised European standards. Please ensure that your Abode product is fitted in accordance with Local Water Byelaws. Where hot and cold water mix within any product, then suitable non return valves should be installed to the hot and cold supplies to prevent backflow.

Whilst assembling this product take care not to accidentally loosen any screwed assemblies. PTFE tape can be used to ensure watertight joins on threaded connections, do not over tighten connections or allow pipes to be twisted or folded.

The installation should be periodically checked for damage, if the property is left unattended for a prolonged period we recommend isolating water supplies.

Abode is a registered trademark of Abode Home Products Limited. All errors and omissions excepted.

Concealed Dual Control Low Pressure Shower 1 Exit

5 Year Warranty Terms & Conditions:

In the unlikely event that you should experience any defect in the materials or workmanship of your new Abode product within FIVE years of purchase, the purchaser’s sole remedy shall be the replacement (at the manufacturer’s discretion) of all or any part of the product that is defective. Valves are guaranteed for a period of FIVE years from purchase. Decorative surface finishes and O-rings are guaranteed for ONE year from the date of purchase provided that our advice concerning care has been observed and no scouring agents have been used.

This is provided that the product has been used for normal domestic purposes in the UK and that the care, installation and maintenance instructions have been observed. The warranty extends to the original purchaser only. You should retain a copy of your dated invoice as proof of purchase to validate any claims under this warranty.

Marks and scratches caused by improper installation or accidental damage are not covered by this guarantee. Neither are shade variations or any damage or defect caused by incorrect installation or abuse of the fitting.

As we are continuously improving and developing our products range, finishes & colours, in the event of a valid claim, we may not be able to provide an identical replacement for the defective product throughout the warranty period. Where an identical product is no longer available, we will supply the nearest equivalent from our then current product range. In assessing your claim, we must be given the opportunity to inspect the product as installed prior to removal. Any product returns must be packaged carefully as received and complete.

No other warranties, express or implied, are made, including merchantability or fitness for a particular purpose. Under no circumstances shall the manufacturer be liable for any loss or damage arising from the purchase, use or inability to use this product, or for any special, indirect, incidental or consequential damages. No liability is accepted for consequential damage to other household fixtures, fittings or furnishings arising from this claim, even if attached to the product. No installer, dealer, agent or employee of Abode Home Products Limited has the authority to modify the obligations or limitations of this warranty.

Product Care Instructions:

To maintain the appearance of this product, ensure that it is regularly cleaned only using a clean, soft damp cloth. A solution of warm water and a mild liquid detergent may be used where necessary, and then the fitting rinsed thoroughly and wiped dry. Any other cleaning action or cleaning products will invalidate your warranty.

Abrasive cleaners, scouring cleaners, limescale cleaners and acidic cleaners **must not be used** under any circumstances. Avoid contact with all solvents (including chlorinated solvents, ketones or acetones as these may result in surface deterioration or etching). Also avoid contact with any harsh household chemicals such as bleach cleaners, drain cleaners, rust removers, paint strippers and toilet bowl cleaners, toothpaste, mouthwash, bar keepers friend or Brasso.

Please leave these instructions for your customer.

Installation Preparation:

All parts should be removed from their packaging and inspected for any transport damage and completeness prior to installation; you should read these instructions throughout before commencing installation.

We do not accept responsibility for problems that may occur through improper installation. Always ensure you have sufficient hot and cold water pressure available to allow correct function before specifying or installing this product.

We strongly recommend installing particle filters and isolation valves to both the hot and cold feed pipes in an accessible position. This will help to prevent premature failure of the valves and ease any future maintenance.

Shut off your water heating system and ensure that your mains stopcock is closed. Ensure both the hot and cold water supplies are isolated before commencing installation.

1. Open the wall out to the required width and depth for the product and plumbing connections. If the rear wall surface is uneven then mount a level wood back board (B) to the wall to ease installation. The rear of the shower body (A) must be parallel with the finished wall surface.
- All serviceable parts should be given suitable access to allow easy future maintenance.
- When preparing the piping run to this shower, arrange the hot pipe to be received to the left hand inlet (D) when viewed from the front, as standard the outlet (F) will be above the shower body (A).
- You should ensure that both the product and required fittings will fit into the depth and area of the mounting surface available before installation. **Roughly assemble the product and plumbing connections to establish the required sizes 'a-d' below.**

After installation:

Once you have visually checked the installation of the new product and all connections, ensure that all other fittings are closed except the new product which should be left open. Turn on your water heating system and ensure that your mains stopcock is open. Reconnect both the hot and cold water supplies to this fitting.

Check the function of flow and function of hot, cold and mixed water, where possible check the function of the thermostatic valve maximum temperature, and shut off function by interrupting the cold water source during use.

Turn off the product and check carefully for any leaks around all connections on the fitting and adjoining plumbing. If possible return to the installation after a longer period to double check for slower leaks. If pressure testing equipment is available check the installation to the maximum recommended pressure.

Clean the product to remove any marks created during installation as instructed, now cover the product to protect the finish until it is ready for use.

Installation Guidance:

Diagram 4

Diagram 5

Key	Description	Qty.
H	Shroud plate (155 x 234mm)	1
I	Control handles	2
J	Rubber seals (pre-fitted inside shroud plate H)	2

Key	Description
f	Minimum 3mm, Maximum 21mm
g	Apx.72mm

1. Attach the 15 mm hot and cold supplies (D, E) to the inlet compression fitting adaptors as shown.
2. Attach the 15mm outlet pipe (F) to the water outlet as shown using the compression fittings.
3. Test the water tightness of all inlet and outlet pipes and connections before progressing with the installation.

This is best done by temporally blocking the outlet and turning the shower on.

4. Make good the finished wall surface using tiles or similar, the tiles must overlap the finished shroud plate (H) by at least 15mm on each side of the plate. Note: Try to leave access to working parts for future maintenance. Ensure tile adhesive and grout are set before proceeding to next step.
5. Lubricate the inside edge of seals (J) lightly with washing liquid or similar.
6. Watchfully seal around the groove on the back side of shroud plate (H) to prevent water ingress into the wall. Note take care not to apply sealant to parts of the shroud plate (H) that will be displayed,
7. Carefully push the shroud plate (H) over the shower body (A) flush to the finished wall. Ensure both seals (J) are flat and flush to the outer rings of the control stems. The shroud plate (H) can be temporally taped to the tiled wall whilst the sealant dries.

Thermostatic Handle Temperature Adjustment (optional stage):

WARNING: We recommend using this product as supplied with the factory set safe temperature. Any amendments made from the factory set temperature as shown may effect the safe use of this product.

Key	Description	Qty.
(A1)	Control handle pin (pre-fitted inside handle).	1
(A2)	Temperature limiting ring	1

1. Note the alignment black pen marks already on the brass and plastic sections of valve body. Using a marker pen mark the current position onto the limiting ring (A2) adjacent to the black mark on the brass and plastic section of the valve.
2. Pull temperature ring (A2) away from shroud body (A).
3. Temporarily place the temperature shower handles on the valves.
4. Turn the shower on fully; let the shower run for a period until the temperature has settled.
5. Turn the temperature handle to the desired output temperature, turn shower off.
6. Remove handles without turning them.
7. Replace temperature ring (A2) so that your newly made pen mark on the temperature ring (A2) is adjacent to the black pen mark on the **brass** section of the valve.

Handle Installation (Varies by handle style):

Harmonie Handle:

1. Unscrew handle stick (5) vertically away from flow handle (1).
2. Push the handle (1) onto the flow control valve. Take care to place the flow control handle (1) in alignment in the off position.
3. Tighten grub screw (3), and replace the handle stick (5).
4. Push the temperature handle (2) on the valve. Ensure the control pin (A1) inside the handle (2) is not interfering with the maximum stop section of the control ring (A2).
5. Tighten grub screw (3) to fix handle, make sure dust cap (4) is placed onto handle (1) as shown.

	<p>Zeal Handle:</p> <ol style="list-style-type: none"> 1. Push the handle (1) onto the flow control valve. Take care to place the flow control handle (1) in alignment in the off position. 2. Tighten grub screw (3) to fix handle, make sure dust cap (4) is placed onto handle (1) as shown. 3. Push the temperature handle (2) on the valve. Ensure the control pin (A1) inside the handle (2) is not interfering with the maximum stop section of the control ring (A2). 4. Tighten grub screw (3) to fix handle, make sure dust cap (4) is placed onto handle (2) as shown.
	<p>Extase Handle:</p> <ol style="list-style-type: none"> 1. Push the handle (1) onto the flow control valve. Take care to place the flow control handle (1) in alignment in the off position. 2. Tighten grub screw (3) to fix handle, make sure dust cap (4) is placed onto handle (1) as shown. 3. Push the temperature handle (2) on the valve. Ensure the control pin (A1) inside the handle (2) is not interfering with the maximum stop section of the control ring (A2). 4. Tighten grub screw (3) to fix handle, make sure dust cap (4) is placed onto handle (2) as shown.
	<p>Bliss Handle:</p> <ol style="list-style-type: none"> 1. Push the handle (1) onto the flow control valve. Take care to place the flow control handle (1) in alignment in the off position. 2. Tighten grub screw (3) to fix handle, make sure dust cap (4) is placed onto handle (1) as shown. 3. Push the temperature handle (2) on the valve. Ensure the control pin (A1) inside the handle (2) is not interfering with the maximum stop section of the control ring (A2). Note: The handle is a one way snap fit and will require firm pressure to connect fully.

Diagram 2	Key	Description	Qty.
	(A)	Shower body	1
	(B)	Back board	0
	(C)	Screws & Plugs	2 & 2
	(D)	Hot inlet	1
	(E)	Cold inlet	1
	(F)	Water outlet	1
	(G)	White spacer rings (pre-fitted) or Flow limiters (Not pre-fitted)	2 or 2
<p>Diagram 3</p> 			

2. Fix inlet and outlet pipes securely to the wall using appropriate fixings. Inlet pipes should finish at the same height and be spaced as required.
 - Before installing the new shower **it is essential that you thoroughly flush through the supply pipes** in order to remove any remaining solder, swarf or impurities from your system. Failure to carry out this simple procedure could cause problems or damage to the workings of the shower and invalidate the warranty.
3. If the hot & cold supply pressures are heavily unbalanced. Substitute the white spacing rings (G) with the flow limiters (G) inside inlets (D & E) as shown in (diagram 3).
4. Place the shower body (A) onto the rear wall or back board (B), mark the fixing holes through the fixing lugs as shown in (diagram 2). Note: Use a spirit level to make sure shower body (A) is fitted vertically as shown, and parallel to the front wall.
5. Drill and plug (C) into the marked holes, now screw (C) through the fixing lugs to the rear wall. Ensure the shower body (A) projects the required distance (Diagram 1 'C') to fit the shroud plate (I) before continuing.
