

**Important: to the fabricator / installer:**  
 The cut out size indicated is flush with the bowl edge with a minimum radius where appropriate.  
 You should confirm with your client if the work surface cutout is to be cut flush, inside or outside this suggested perimeter size.  
 If you create the cutout smaller or larger than the indicated size then some accessories may not fit correctly. All details are provided in good faith and within the tolerances of the manufacturing process.  
 We recommend that a test cutout is made in scrap timber and checked against the actual sink supplied before committing to cutting the work surface.  
 Abode can not accept liability for problems or costs incurred by failure to follow this advise.  
 AW5005 v1 (c) abode 2009

Technical drawing of a rectangular work surface with rounded corners. The overall width is 534 and the overall height is 404. The corners are rounded with a radius of R27. There are two cutouts on the top edge. The left cutout has a width of 163 and a depth of 73. The right cutout has a width of 190 and a depth of 73. The radius of the cutouts is R27.4. The radius of the corners is R27.
