General Advice:

- These instructions are intended as a guide only, if you are in any doubt you should seek the advice of a
 qualified professional.
- Take care not to mark finished parts with screwdrivers or other tools.
- Use a pair of rubber gloves to get a better grip on decorative hand tight parts.
- Ensure all parts are reassembled tightly.
- After maintenance test that all assemblies are water tight and function correctly.
- Always isolate the hot and cold water supplies before starting any maintenance, once isolated you should drain any residual water from your system.

To replace the cold valve:

- 1. Loosen grub screw (C1) on the underside of handle (C2) using a 2.0 mm A/F allen key.
- 2. Pull the handle (C2) horizontally away from the tap body (B1).
- 3. Unscrew the decorative cover (C3) and indices (C4) horizontally away from tap body (B1) by hand.
- 4. With the tap (B1) fixed to the sink/base unit, using an adjustable spanner unscrew the valve lock nut (C5).
- 5. Clean the Inside of chamber (B1) with a soft wet cloth.
- 6. Replace the faulty valve (C6) with the new one and assemble in reverse order.

To replace the spout o-rings:

- 1. Loosen grub screw (A14) on the back of body (B1) using a 2.5 mm A/F allen key.
- 2. Pull the spout (A7) vertically away from the tap body (B1).
- 3. Remove upper PTFE ring (A10 & A13) and O-rings (A11 & A12) using a precision screwdriver and replace with new ones.
- 4. Reassemble the tap in reverse order.
